

DPS-300

DISC PAD SERVICE

USER-FRIENDLY

VERY SIMPLE INTERFACE

EOBD CABLE STANDARD INTERFACE

POSSIBLE DOWNLOAD OF RELEASES

DPS-300

Is a simple and user-friendly Brain Bee tool, projected for brake systems, in order to **intervene** and **carry out routine service operations**.

In a few seconds, **DPS-300** allows to open the brake system of vehicles equipped with EPB, Electronic Parking Brake system, or SBC, Electrohydraulic parking Brake system.

EPB and SBC in fact close the brake system when the vehicle is stationary, which means that it would not be possible to effect reparations without the apposite specific opening system proposed by vehicle manufacturers.

It is sufficient to have just one tool, **DPS-300**, to operate on every car brand (now and in the future) equipped with EPB or SBC, by its universal software and its EOBD cable, without the use of other specific diagnostic tool.

Few operations for maximum result

- > **1.** recognise your car model, through simple scheme in the back of **DPS-300**;
- > **2.** connect DPS-300 to the diagnostic socket;
- > **3.** select the model, through led correspondence;
- > **4.** press "Open" key.

In this way it is possible to intervene and carry out all routing service operations, in a safe and quick way.

In the same easy way, after having finished the brake system check in, **DPS-300** let you restore the initial system condition.
